Subject Index of Volume A 49

- Airborne ultrasound
 - paper roughness measurement using airborne ultrasound, 37
- Air-flow sensors
 - air-flow sensor and humidity sensor application to neonatal infant respiration monitoring, 47
- Ammonia
 - selective etching of silicon in aqueous ammonia solution, 115
- Anisotropic etching
 - catalytic control of anisotropic silicon etching, 181
- Aroma sensors
 - discrimination of aromatic optical isomers using quartz-resonator sensors, 73
- Beam-shaped microactuators
 - damping characteristics of beam-shaped micro-oscillators, 87
- Bipolar magnetotransistors
 - experimental research on the sensitivity and noise level of bipolar and CMOS integrated magnetotransistors and judgement of their applicability in weak-field magnetometers, 163
- Boron
 - variational method for tensile stress evaluation and application to heavily boron-doped square-shaped silicon diaphragms, 21
- Cantilevers
 - surface-micromachined epitaxial silicon cantilevers as movable optical waveguides on silicon-on-insulator substrates, 109
- Catalysts
 - catalytic control of anisotropic silicon etching, 181
- CMOS magnetotransistors
 - experimental research on the sensitivity and noise level of bipolar and CMOS integrated magnetotransistors and judgement of their applicability in weak-field magnetometers, 163
- Damping
 - damping and gas viscosity measurements using a microstructure, 103
- Damping characteristics
 - damping characteristics of beam-shaped micro-oscillators, 87
- Data processing
 - a tactile sensor data-processing system, 173
- Displacement micrometers
 - a fiber-optic reflective displacement micrometer, 51
- Electrocaloric principle
 - low-cost silicon sensors for mass flow measurement of liquids and gases, 17
- Ferroelectric thin films
 - characterization of (Pb, La)TiO₃ thin films prepared by sol-gel processing, 187
 - preparation of PZT ferroelectric thin films by sol-gel processing and their properties, 191
- Fiber optics
 - a fiber-optic reflective displacement micrometer, 51
- Functional gradient materials
 - shear axial modes in a PCTSCM. Part I: piezoelectric stiffening and selective attenuation, 195
- Gas sensors
 - discrimination of aromatic optical isomers using quartz-resonator sensors, 73
- Gas viscosity
 - damping and gas viscosity measurements using a microstructure, 103
- Heat-flux meters
 - steady-state analysis of the zero-balance heat-flux meter, 29
- Heterocyclic catalysts
 - heterocyclic catalysts for enhanced silicon oxidation and wet chemical etching, 167
- High-voltage arrangements
 - luminescence temperature sensor for high-voltage arrangements, 57
- Humidity sensors
 - air-flow sensor and humidity sensor application to neonatal infant respiration monitoring, 47
- Hysteresis compensation
 - compensation of hysteresis in solid-state actuators, 97
- Infrared sensors
 - PVDF sensors with low-temperature bonding techniques, 61
- Lamb-wave sensors
 - a general dispersion relation for Lamb-wave sensors with liquid-layer loading, 79
- Lead lanthanate titanate
 - characterization of (Pb, La)TiO₃ thin films prepared by sol-gel processing, 187
- Lead zirconate titanate
 - preparation of PZT ferroelectric thin films by sol-gel processing and their properties, 191
- Light-emitting diodes
 - a wide-range linear optical accelerometer, 149
- Linear voltage excitation
 - compensation of sensitivity shift in piezoresistive pressure sensors using linear voltage excitation, 11
- Liquid-layer loading
 - a general dispersion relation for Lamb-wave sensors with liquid-layer loading, 79
- Low-temperature bonding
 - PVDF sensors with low-temperature bonding techniques, 61
- Luminescence
 - luminescence temperature sensor for high-voltage arrangements, 57
- Magnetic-field sensors
 - modelling of split-drain magnetic field-effect transistor (MAGFET), 155

Magnetometers

- experimental research on the sensitivity and noise level of bipolar and CMOS integrated magnetotransistors and judgement of their applicability in weak-field magnetometers, 163

Mass flow rates

- low-cost silicon sensors for mass flow measurement of liquids and gases, 17

Membranes

- applications of thermal silicon sensors on membranes, 1

Micro-oscillators

- damping characteristics of beam-shaped micro-oscillators, 87

Microstructures

- damping and gas viscosity measurements using a microstructure, 103

Micro-technology

- low-cost silicon sensors for mass flow measurement of liquids and gases, 17

Modelling

- modelling of split-drain magnetic field-effect transistor (MAGFET), 155

Movable optical waveguides

- surface-micromachined epitaxial silicon cantilevers as movable optical waveguides on silicon-on-insulator substrates, 109

Neonatology

- air-flow sensor and humidity sensor application to neonatal infant respiration monitoring, 47

Optical accelerometers

- a wide-range linear optical accelerometer, 149

Optical isomers

- discrimination of aromatic optical isomers using quartz-resonator sensors, 73

Paper roughness

- paper roughness measurement using airborne ultrasound, 37

Piezoelectric stiffening

- shear axial modes in a PCTSCM. Part I: piezoelectric stiffening and selective attenuation, 195

Piezoresistance

- piezoresistive properties of polysilicon films, 67

Piezoresistive pressure sensors

- compensation of sensitivity shift in piezoresistive pressure sensors using linear voltage excitation, 11

PIN diodes

- a wide-range linear optical accelerometer, 149

Polycrystalline films

- piezoresistive properties of polysilicon films, 67

Polymer-based resistors

- an analysis of polymeric thick-film resistors as pressure sensors, 41

Poly-vinylidene fluoride

- PVDF sensors with low-temperature bonding techniques, 61

Pressure sensors

- an analysis of polymeric thick-film resistors as pressure sensors, 41

Pyroelectric anemometry

- pyroelectric anemometry: theory of operation, 125
- pyroelectric anemometry: frequency, geometry and gas dependence, 133
- pyroelectric anemometry: vector and swirl measurements, 141

Quartz resonators

- discrimination of aromatic optical isomers using quartz-resonator sensors, 73

Respiration monitoring

- air-flow sensor and humidity sensor application to neonatal infant respiration monitoring, 47

Selective attenuation

- shear axial modes in a PCTSCM. Part I: piezoelectric stiffening and selective attenuation, 195

Selective etching

- selective etching of silicon in aqueous ammonia solution, 115

Silicon

- applications of thermal silicon sensors on membranes, 1
- selective etching of silicon in aqueous ammonia solution, 115
- catalytic control of anisotropic silicon etching, 181

Silicon diaphragms

- variational method for tensile stress evaluation and application to heavily boron-doped square-shaped silicon diaphragms, 21

Silicon-on-insulator

- surface-micromachined epitaxial silicon cantilevers as movable optical waveguides on silicon-on-insulator substrates, 109

Silicon oxidation

- heterocyclic catalysts for enhanced silicon oxidation and wet chemical etching, 167

Silicon sensors

- low-cost silicon sensors for mass flow measurement of liquids and gases, 17

Sol-gel processing

- characterization of (Pb, La)TiO₃ thin films prepared by sol-gel processing, 187
- preparation of PZT ferroelectric thin films by sol-gel processing and their properties, 191

Solid-state actuators

- compensation of hysteresis in solid-state actuators, 97

Split-drain MAGFETs

- modelling of split-drain magnetic field-effect transistor (MAGFET), 155

Steady-state analysis

- steady-state analysis of the zero-balance heat-flux meter, 29

Stress evaluation

- variational method for tensile stress evaluation and application to heavily boron-doped square-shaped silicon diaphragms, 21

Structurally chiral media

- shear axial modes in a PCTSCM. Part I: piezoelectric stiffening and selective attenuation, 195

Surface micromachining

- surface-micromachined epitaxial silicon cantilevers as movable optical waveguides on silicon-on-insulator substrates, 109

Swirl measurements

- pyroelectric anemometry: vector and swirl measurements, 141

Tactile sensors

- a tactile sensor data-processing system, 173

Temperature sensors

- luminescence temperature sensor for high-voltage arrangements, 57

Thermal sensors

- applications of thermal silicon sensors on membranes, 1

Thick films

- an analysis of polymeric thick-film resistors as pressure sensors, 41

Thin films

- PVDF sensors with low-temperature bonding techniques, 61

Variational method

- variational method for tensile stress evaluation and application to heavily boron-doped square-shaped silicon diaphragms, 21

Vector measurements

- pyroelectric anemometry: vector and swirl measurements, 141

Wet chemical etching

- heterocyclic catalysts for enhanced silicon oxidation and wet chemical etching, 167
